

Whitening without compromise

The new Grin Pro Enzyme Whitening+ with Fluoride puts the 'care' back into whitening oral care products. This triple enzyme formula delivers whitening results without compromising long term oral health, and is free from hydrogen peroxide and harsh abrasives.

Grin Pro Enzyme Whitening+ with Fluoride

Powered by enzymes found in nature, backed by science.

This is the first of our new Grin Pro range, where we're taking nature's best ingredients to new heights.

The triple enzyme-boosted formula is specially formulated to dissolve extrinsic stains, leaving you with a brighter, whiter smile.

PAPAIN (Papaya Extract)

Brightens teeth and removes stains by disrupting the layer of plaque that forms on teeth over time.

BROMELAIN (Pineapple Extract)

Dissolves stains on the enamel surface, prevents bacteria and stains accumulating on the tooth surface.

L-ARGININE (Amino Acid)

Inhibits the formation of biofilm, a sticky layer of plaque that forms on your teeth that when left undisturbed can harm your gum tissue.

The combination of L-arginine and fluoride creates a match made in heaven for decreasing hypersensitivity.

We're harnessing the best of nature without the need for nasties like SLS, parabens, triclosan and hydrogen peroxide that leave your teeth and gums irritated.

Full Ingredient List:

Calcium Carbonate, Glycerin (Palm-free from Rapeseed), Aqua (Water), Xylitol, Sodium Bicarbonate, Lauryl Glucoside (Palm-free from Coconut), Carrageenan, Aroma, Sodium Monofluorophosphate, Sodium Phytate, Xanthan Gum, Bromelain, Papain, Arginine
