

BE A pHIGHTER!

Protect Your Patients Day and Night

Cavity pHighter™ is a convenient and effective system to identify at-risk patients and help improve their condition.

A correlation between low incidence of cavities and high saliva pH and high saliva buffering capacity has been demonstrated. Studies have concluded that salivary pH may be used as a diagnostic indicator.

pHIGHTER®**

cavity pHIGHTER®

The convenience and simplicity of the Cavity pHighter system allows patients to incorporate protective oral health measures at home and in the office.

Cavity pHighter mints are designed to reduce the acid levels in your mouth. The acids may originate from food or drink, or when normal bacteria in your mouth process food particles. Excessive acid levels may increase your risk for cavities. Cavity pHighter mints buffer the acid in your mouth and raise the pH to safer levels.

Single Bottle (60 pieces) \$29.90

Cavity pHighter strips measure the pH and buffer capacity in your saliva. The strips are best used after a meal when these levels may be low, indicating that acid levels are high. Excessive acid levels may increase your risk for cavities. Do a simple test with Cavity pHighter testing strips. If pH and buffer capacity are low, enjoy a Cavity pHighter mint to reduce and buffer the acid in your mouth and raise the pH to safer levels.

Single Bottle (60 pieces) \$27.90

**NEW PRODUCTS
COMING SOON!**

Stay tuned for future products in the Cavity pHighter family including Sugar-Free gum, Dentifrice dental powder, and Flexi-Soft floss picks!
