

The Cavity pHighter System

Assess and Help Reduce Caries Based on Scientific Saliva Testing.

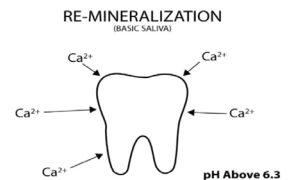

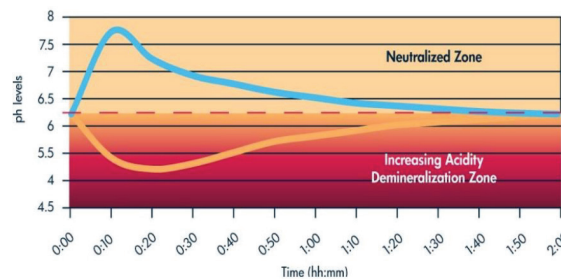

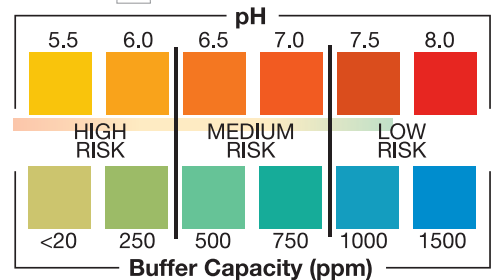

Assess:

Two critical factors contributing to the risk of dental caries are pH level and buffer capacity in the saliva. Cavity pHighter strips can quickly and accurately identify pH level and buffer capacity in a patient's saliva to rapidly indicate the risk of caries. It's so easy to use that you can test in office or send the strips home with a patient to track their risk.

Help Reduce:

Improving the patient's hygiene habits is easy with Cavity pHighter mints. The mints increase the saliva pH, as well as increase saliva flow and increase buffer capacity by releasing soluble calcium to promote healthy tooth enamel.

 pHIGHTER®**

cavity pHIGHTER®

The cavity pHighter system promotes healthy and stable saliva to combat caries in patients.

HOW TO IMPLEMENT THE CAVITY PHIGHTER SYSTEM IN YOUR PRACTICE

The strips are designed for a quick and easy test, complete with a simple to understand visual presentation to engage and document with your patient.

With this information you can now setup a treatment plan based on the patient's risk level

- **High Risk Care Plan**

Increase oral hygiene care, provide testing strips for home testing, send home Cavity pHighter mints for use after eating, increase fluoride application, and reassess in office every 3 months.

- **Medium Risk Care Plan**

Increase oral hygiene care, provide testing strips for home testing, send home Cavity pHighter mints for use after eating, increase fluoride application, and reassess in office every 6 months.

- **Low Risk Care Plan**

Maintain current oral hygiene care and check every 6 month

Cavity pHighter will benefit your practice by:

- Creating additional revenue from salivary testing
- Increasing revenue by implementing care plans
- Continued revenue from providing testing strips and mints for home use
- Generate patient engagement and retention.
